Excellent Phase Noise Performance using
New Synthesizer Design

Based on more than 120 years of technological excellence,
Anritsu has built a new synthesizer design into the MS2840A,
offering never-seen-before, high, close-in phase noise performance.

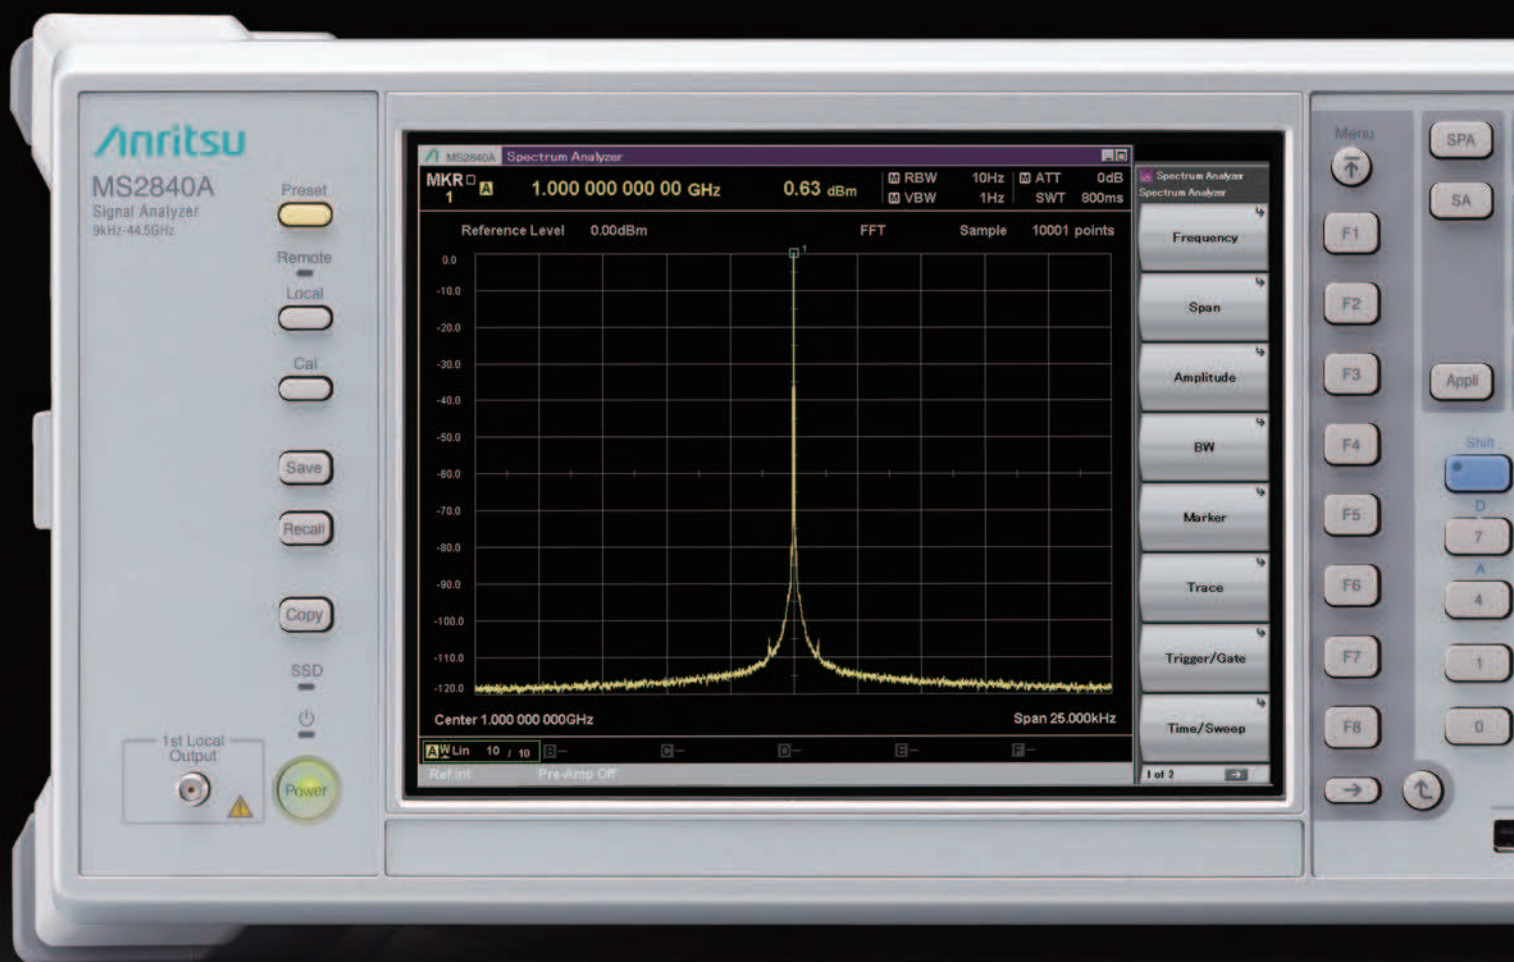

**For R&D and Manufacturing of Wireless Equipment,
Radar and Transmitter Device**

The MS2840A close-in phase noise performance is -123 dBc/Hz (10 kHz offset) at a measurement frequency of 1 GHz. Additionally, this excellent fundamental performance is leveraged at millimeter-wave-band measurements (50 GHz to 90 GHz). With the High Performance Waveguide Mixer connected, an extremely high performance of -100 dBc/Hz (10 kHz offset, meas.*) is achieved at a measurement frequency of 79 GHz.

The MS2840A with high, close-in phase-noise-performance spectrum and signal analyzers is ideal for developing and manufacturing radio and radar equipment as well as transmitters, etc., at every measurement frequency.

Signal Analyzer MS2840A Features

Better Than Expected Close-in Phase Noise Performance

Since 2000 most spectrum analyzers have been designed for mobile communications and the phase noise performance has been optimized for offset frequencies of several MHz. Consequently, customers requiring good close-in phase noise performance have been limited to a narrow choice of usable spectrum analyzers, causing problems. This new MS2840A has been designed with emphasis on offering a spectrum analyzer with excellent close-in noise performance at offset frequencies of just several kHz. This performance surpasses that of first-generation high-end spectrum analyzers and has sufficient margin for evaluating the close-in spurious of narrowband communications equipment in the short-wave, VHF, and UHF bands. Furthermore, this excellent phase noise performance proves its usefulness in the microwave and millimeter wave bands for evaluating microwave wireless equipment, aerospace equipment, weather radar, 79-GHz band automotive collision-prevention radar, and other devices requiring oscillator measurements. It supports measurements previously requiring large, expensive phase noise measuring instruments while offering excellent noise performance in a middle-price-range spectrum analyzer.

Signal Analyzer MS2840A Features

Better Than Expected Close-in Phase Noise Performance (High-Performance Waveguide Mixer)

The MS2840A is supported by two types of mixer: the high-performance waveguide mixers (50 GHz to 90 GHz) for measurements in the millimeter wave band, and external harmonic mixers (26.5 GHz to 325 GHz). In particular, the high-performance waveguide mixers make maximum use of the excellent phase noise performance of the MS2840A to monitor the actual spectrum floor of millimeter-wave-band transmitters and oscillators, playing a key role in evaluating their phase noise performance.

High-Sensitivity Measurements in Microwave and Millimeter Wave Bands

The MS2840A has excellent display average noise level (DANL) specifications. In particular, when the built-in preamplifier is on, it has a high sensitivity measurement performance of better than -160 dBm/Hz in the frequency range from 0.03 GHz to 34 GHz. Even when connected with either of the MA2806A and MS2808A high-performance waveguide mixers (50 GHz to 90 GHz), the MS2840A maintains a performance of -150 dBm/Hz (meas.*) at 75 GHz, supporting high-sensitivity measurements over a wide frequency range. This performance proves its usefulness in capturing low-level signals and antenna side lobes in test systems with large coupling losses, such as free-space propagation measurements at antenna coupling.

Faster Measurement Speeds

With a built-in high-performance Intel Core i5-4400E, 2.7 GHz CPU and 8 GB of main memory supporting the 64-bit Windows 7 OS, the MS2840A is much faster than its predecessor MS2830A, offering greatly improved averaging processing times for screen displays and much faster processing when displaying the results of signal analyzer and software analysis functions.

Spurious Emission

This function splits the frequency range into up to 20 segments for sweeping; the measurement parameters and limit lines can be specified to measure the peak power and margin for each segment. The results are tabulated below the trace and marked PASS/FAIL.

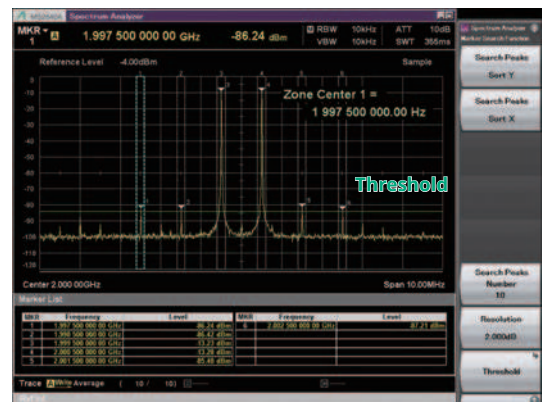

Burst Average Power

The average power for the range specified by two markers is displayed in the time domain. Measurement only requires setting the measurement start and stop positions on the screen. True performance is measured using the noise cancellation function to subtract main-frame noise from the measurement result. Pre-installed templates for each standard support easy parameter setting.

Multi-marker & Marker List

Up to 10 markers can be set for this function. Markers may be either a spot or a zone. Using a zone marker, the peak of a signal with an unstable variable frequency can be tracked and measured. Not only can the 10 markers be listed below the trace but the differences between markers can be calculated and displayed using the delta setting.

Highest 10 Markers

This function sets the threshold level and auto-detects peaks in the X (frequency) and Y (level/time) directions.

Signal Analyzer MS2840A Functions

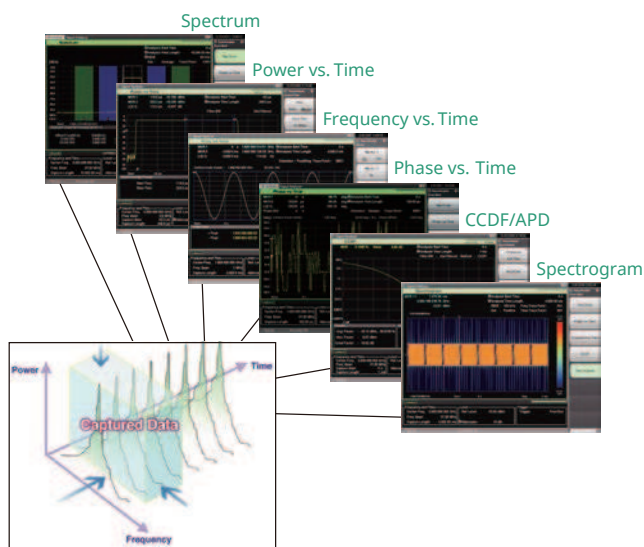

Signal Analyzer (Standard)

A function for evaluating burst-signal transient response characteristics plus a Fast Fourier Transform (FFT) function for the 31.25-MHz analysis bandwidth are built into the MS2840A-006/009 as standard to capture measured waveforms seamlessly and perform multi-domain analyses.

These functions are ideal for capturing degraded spectrum transients, and help troubleshoot faults that cannot be captured by a sweep spectrum analyzer (50 MHz max. sampling rate = 20 ns resolution, ADC resolution 16 bits)

Measurement Functions

Capture & Replay Function

Waveform data can be saved (captured) to the internal memory. In addition, previously saved waveform data can be loaded (replayed) to reproduce result displays whenever necessary using measurement functions.

Max. Capture Time: 2 s to 2000 s

Max. Number of Samples: 100 Msamples

The following chart shows the maximum capture time per frequency span.

Spectrum trace

The CCDF trace displays the power variation probability on the y-axis and power variation on the y-axis to confirm the CCDF and APD of measured signals.

Power vs. Time

The Power vs. Time trace displays a graph with amplitude on the y-axis and time on the x-axis to confirm changes in power with time of measured signals.

Frequency vs. Time

The Frequency vs. Time trace displays a graph with frequency on the y-axis and time on the x-axis to confirm time variation of the measured signal frequency.

Phase vs. Time

The Phase vs. Time trace displays a graph with phase on the y-axis and time on the x-axis to confirm time variation of the measured signal phase.

CCDF/APD

The CCDF trace displays the power variation probability on the y-axis and power variation on the y-axis to confirm the CCDF and APD of measured signals.

CCDF (Complementary Cumulative Distribution Function):

The CCDF display indicates the cumulative distribution of transient power variations compared to average power.

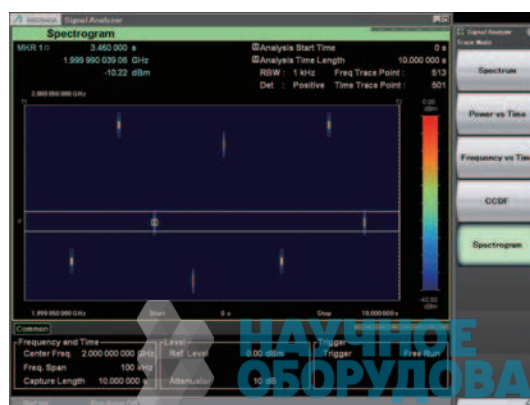

APD (Amplitude Probability Density):

The APD display indicates the probability distribution of transient power.

Spectrogram

The Spectrogram trace displays the level as color with frequency on the y-axis and time on the x-axis. The captured IQ data is FFT processed to confirm time variations in the continuous spectrum. It is useful for monitoring frequency hopping and transient signals.

Other Measurement Functions

Phase Noise Measurement Function (MS2840A-010)

The excellent close-in phase noise performance of the MS2840A supports phase noise measurement of transmitters with a frequency offset range of 10 Hz to 10 MHz and also supports when connected to the High Performance Waveguide Mixer (MA2806A, MA2808A).

Measurement Results

- Carrier level
- Error between set frequency and carrier frequency
- Marker point phase noise level

There are four measurement modes using different loop filters, which are switched to match the DUT.

Auto:

This mode switches automatically to the best loop filter for measuring the carrier signal close-in and wide-offset phase noise characteristics

Best Close-in:

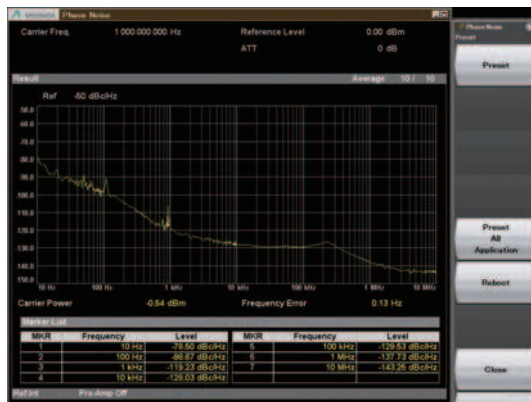

This mode uses the best loop filter for measuring the carrier signal close-in phase noise characteristics.

Best Wide-offset:

This mode uses the best loop filter for measuring the carrier signal wide-offset phase noise characteristics.

Balance

This mode uses the loop filter with a good balance for measuring both close-in and wide-offset phase noise characteristics of the carrier signal.

Signal Analyzer MS2840A Functions

High Performance Waveguide Mixer/External Mixers (Harmonic Mixers)

Two types of mixer can be connected to the MS2840A for millimeter-wave-band measurements; spectrum measurements up to 325 GHz are supported using either a High-Performance Waveguide Mixer or an external harmonic mixer. In particular, the two High Performance Waveguide Mixer models are ideal for measuring wideband signals and the excellent phase noise performance of the MS2840A plays a key role in analyzing the true spectrum of millimeter-wave-band transmitters.

High Performance Waveguide Mixer MA2806A/MA2808A

Model	Name	Frequency Band	Frequency Range	Waveguide	Flange
MA2806A	High Performance Waveguide Mixer (50 to 75 GHz)	V band	50 GHz to 75 GHz	WR15	UG-385/U
MA2808A	High Performance Waveguide Mixer (60 to 90 GHz)	E band	60 GHz to 90 GHz	WR12	UG-387/U

Features

- Wide dynamic range based on excellent minimum sensitivity and P1dB performance
- High phase noise performance connected to MS2840A
- Image-response-free measurement of wideband signals plus high IF frequency and PS function*1

The MA2806A and MA2808A have a dedicated multiplier, amplifier, bandpass filter, etc., supporting an excellent conversion loss of at least 10 dB better than conventional harmonic mixers, as well as P1dB performance exceeding 0 dBm. When used in combination with the MS2840A, the display average noise performance level is excellent at -150 dBm/Hz (meas.)*2 at 75 GHz. Due to this wide dynamic range, the MA2806A and MA2808A support evaluation of the true spurious performance of wider-band, millimeter-wave wireless transmitters as well as various types of millimeter-wave equipment, such as automotive radar, wireless backhaul and gigabit wireless LAN (IEEE 802.11ad/WiGig) etc., that cannot be evaluated accurately using conventional harmonic-mixer and down-converter methods.

Moreover, by using the high IF frequency (1.875 GHz) of the MS2840A, spectrum mask measurements can be made over a wide measurement span with no impact from image-response effects. Spectrum mask measurements require measurement over a wider measurement span than the bandwidth of the signal to be measured. For example, when using the MA2806A and MA2808A to measure a signal with a bandwidth of 1 GHz, no image response occurs in a wide measurement span covering 6.5 GHz. Moreover, no image response occurs in a measurement span of 5.5 GHz for a signal with a bandwidth of 2 GHz. Additionally, use of the newly developed PS function supports image-response-free measurements over a measurement span of up to 7.5 GHz, irrespective of the measured signal bandwidth.

Additionally, connecting these mixers to the MS2840A supports measurements using its excellent high phase noise performance of -100 dBc/Hz in the 79-GHz band (10 kHz offset frequency, meas.*2) for evaluating the intrinsic phase noise performance of millimeter-waveband devices, such as automotive radar.

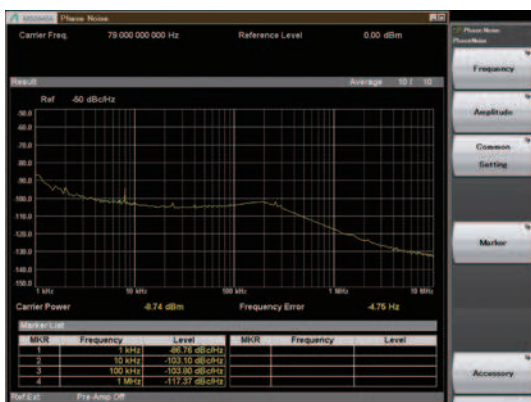

Connection to the MS2830A is as easy as simply connecting a cable to the IF port. Conversion loss data saved in a USB memory stick is loaded into the MS2830A for reflection in the measured values.

Measurement Method	Product Selection Points				
	Min. Sensitivity	Image Response	P1dB	System Config	Mixer Conversion Loss Calibration

Harmonic Mixer 	*1  Bad	*2  Very Close	 High	 Simple	*4  No Need
Down Converter 	 Good	 Very Far	*3  Low	 Complex	*5  Need

- *1: High noise floor level and narrow dynamic range due to high mixer conversion order
 *2: Low IF frequency depending on spectrum analyzer causes occurrence of image response generated in measurement range
 *3: Narrow dynamic range due to mixer P1dB performance of only -10 to -5 dBm
 *4: Different calibration procedure depending on spectrum analyzer used
 *5: Requires mixer conversion loss data for measurement range because any IF frequency can be set

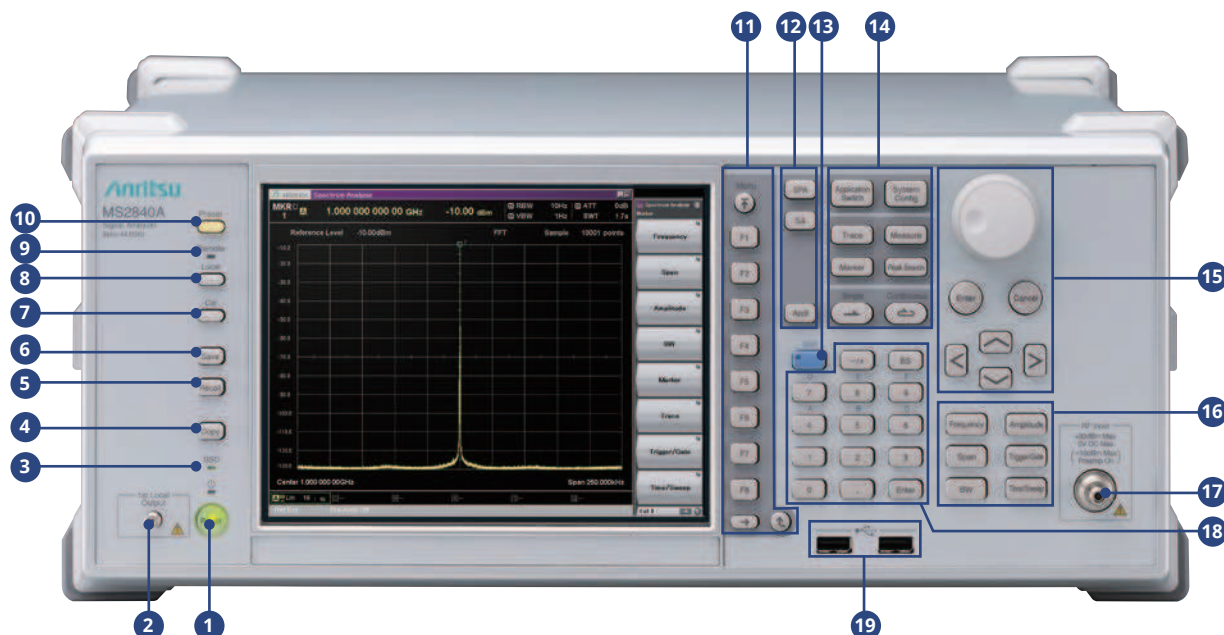

External Mixers (Harmonic Mixers)

The MA2740C/MA2750C series of external mixers (harmonic mixers) supports spectrum measurements up to 325 GHz with excellent cost performance.

Inputs an external reference frequency signal (5/10/13 MHz). It is used for inputting reference frequency signals with accuracy higher than that of those inside the MS2840A, or for synchronizing the frequency of the MS2840A to that of other device.
- 28 Buffer Out connector (reference frequency signal output connector)**
Outputs the reference frequency signal (10 MHz) generated inside the MS2840A. It is used for synchronizing the frequencies between other devices and the MS2840A based on the reference frequency signal output from this connector.
- 29 SA Trigger Input connector**
This is a BNC connector used to input the external trigger signal (TTL) for the Spectrum Analyzer or Signal Analyzer application.
- 30 Sweep Status Out connector**
Outputs a signal that is enabled when an internal measurement is performed or measurement data is obtained.
- 31 GPIB connector**
Used when controlling the MS2840A externally via GPIB.
- 32 Noise Source Drive connector**
This is available when the MS2840A-017/117 is installed. Supply (+28 V) of the Noise Source Drive.
- 33 IF Output connector**
Monitor output of internal IF signal
Connector: SMA-J, 50Ω
IF Output Frequency: 1.875 GHz

Total Absolute Amplitude Accuracy

Preamp: None

± 0.5 dB ($300 \text{ kHz} \leq f < 4 \text{ GHz}$)

± 1.8 dB ($4 \text{ GHz} \leq f < 13.8 \text{ GHz}$)

± 3.0 dB ($13.8 \text{ GHz} \leq f < 40 \text{ GHz}$)

± 3.5 dB ($40 \text{ GHz} \leq f < 44.5 \text{ GHz}$)

The MS2840A supports level calibration over a wide range of 300 kHz to 4 GHz using its built-in level calibration oscillator.

The level accuracy standards include frequency characteristics, linearity and attenuator switching error. Consequently, the level including the above three errors can still be measured accurately even when the measurement frequency and built-in attenuator settings are changed.

2-tone 3rd-order Intermodulation Distortion

Preamp: None

Frequency	2-tone 3rd-order Intermodulation Distortion
1 GHz	≤ -62 dBc (TOI = +16 dBm)

Signal Analyzer MS2840A Related Products

Signal Analyzer MS2830A

9 kHz to 3.6 GHz/6 GHz/13.5 GHz/26.5 GHz/43 GHz

This middle-range multi-function signal analyzer/spectrum analyzer has excellent cost performance.

Features

- Various measurement software for modulation analysis of digital (LTE/LTE-Advanced, WLAN, etc.) and analog (FM, Φ M, AM) devices.
- Built-in vector signal generator and analog signal generator options for all-in-one evaluations of digital and analog transmitters using Noise Factor (NF) measurement function, BER measurement function, audio analyzer, etc.
- Built-in vector signal generator for reproducing on-site waveform measurement environment using capture and playback functions.
- Like the MS2840A, frequency range expandable (≥ 325 GHz) up to millimeter-wave band by combined use with High Performance Waveguide Mixer and external mixer.

Signal Analyzer MS2690A/MS2691A/MS2692A

50 Hz to 6 GHz/13.5 GHz/26.5 GHz

This high-level signal analyzer/spectrum analyzer has excellent phase noise performance, dynamic range and measurement level accuracy.

Features

- Expandable to 6-GHz band with built-in calibration oscillator for excellent measurement level accuracy and modulation precision over frequency range from 50 Hz to 6 GHz.
- Various measurement software for LTE/LTE-Advanced, WLAN, etc.
- Built-in vector signal generator for all-in-one TRx evaluations of digital equipment using Noise Factor (NF) measurement function and BER measurement function.
- Built-in vector signal generator for reproducing on-site waveform measurement environment using capture and playback functions.
- Compact design with small footprint.
