<sup>1</sup> Base model functionality listed is the primary function of that instrument. For example, on the N991xB combo analyzers, cable and antenna analyzer is the standard function included with every N991xB.

<sup>2</sup> Option 305 is not available on the N993xB. A subset of measurements, return loss and VSWR, is available as Option 320.

<sup>3</sup> Option 320 is not applicable to N991xB. The reflection measurements of return loss and VSWR are included with every N991xB.

<sup>4</sup> On the N991xB analyzers, order Options 233 and 210 to obtain a tracking generator with the spectrum analyzer. There is no Option 220 on the N991xB analyzers. Option 233 provides the spectrum analyzer capability and Option 210 the “tracking” capability.

	With Options 308, 210, and 211: 1-port cable trimming, 2-port transmission, A/B and B/A
	Note: A/B and B/A measurements require an external source
9. What are the requirements for Option 209?	Extended Range Transmission Analysis (ERTA) or Option 209 is a scalar measurement system based on the use of two (2) FieldFox units. One FieldFox acts as the <i>source</i> and reference receiver, while the second FieldFox acts as the <i>measurement</i> receiver. When different frequency models are used in an ERTA pair, the ERTA system frequency range is limited to the lowest of the pair.
	<b>Required hardware</b>
	A. Two (2) FieldFox units. FieldFox units can be any of these models: <ul style="list-style-type: none"> <li>- FieldFox microwave combination analyzers: N9913B, N9914B, N9915B, N9916B, N9917B, N9918B</li> <li>- FieldFox microwave spectrum analyzers: N9933B, N9934B, N9935B, N9936B, N9937B, N9938B</li> </ul>
	The two FieldFox units used in ERTA do not have to be the same model. <ul style="list-style-type: none"> <li>- ERTA requires the following options on Combo FieldFox models (N9913B, N9914B, N9915B, N9916B, N9917B, N9918B):</li> <li>- Option 210, VNA transmission/reflection</li> <li>- Option 233, spectrum analyzer</li> </ul>
	ERTA requires the following options on SA FieldFox models (N9933B, N9934B, N9935B, N9936B, N9937B, N9938B) <ul style="list-style-type: none"> <li>- Option 220, tracking generator</li> </ul>
	Both FieldFox units (the one used as the source, and the other used as the receiver) must have the options listed above. The ERTA option (209) cannot be installed unless 210 and 233 are present on a combo analyzer; or 220 is present on a SA analyzer.
	With either the Combo or SA FieldFox units, the following options are highly recommended: <ul style="list-style-type: none"> <li>- Option 235, preamplifier – this option increases the measurement dynamic range by increasing the received signal power</li> <li>- Option 307, GPS receiver – this option increases the dynamic range by increasing the frequency accuracy and permitting the use of a narrower RBW</li> </ul>
	B. Power splitter, two-resistor model, Keysight 11667A, 11667B, or 11667C. Other power splitters can be used but the specifications listed are based on the match and tracking performance of 11667A, 11667B, or 11667C. Three-resistor power splitters are not recommended.
	C. N9910X-712, Trigger/Reference-in cable, SMA (m) to BNC(f), 1 m, quantity two
	D. N9910X-713, Trigger/Reference-out cable, SMB (m) to BNC (m), 1 m, quantity two
	E. LAN connection – For ERTA, the two FieldFox units communicate via a LAN connection. For a direct connection, a LAN cable is required. Alternately, both analyzers can be on a local area network.
	<b>Recommended accessory</b>
	F. N9910X-825, GPS Antenna
10. What is included with Option 355?	FieldFox analog demodulation has two parts: (1) Tune and listen, and (2) AM/FM metrics. Tune and listen is available with the purchase of the spectrum analyzer option 233. AM/FM metrics becomes available when Option 355 is purchased. AM/FM metrics provides the user with RF spectrum view, demodulated baseband signal waveform, carrier power, frequency deviation, SINAD and more.

Question	Answer												
11. What is included with Option 350?	Real-time spectrum analyzer (RTSA) or Option 350 provides real-time measurements on a FieldFox. The FieldFox must be equipped with spectrum analysis capability. The preamplifier option is recommended, as elusive signals often have low power levels. The maximum real-time bandwidth for option 350 is 10 MHz (standard), 40 MHz (Option B04), or 100 MHz (Option B10). RTSA includes trace recording and playback capabilities. It does not include a frequency-mask trigger (FMT).												
12. Is Spectrum Analyzer Trace Recording and Playback standard or an option?	<p>Spectrum Analyzer mode (Option 233) does not include Trace Recording and Playback by default. To obtain this capability in SA mode, Option 236 Interference Analyzer and Spectrogram needs to be purchased.</p> <p>RTSA mode (Option 350) does include Trace Recording and Playback by default in RTSA mode.</p> <p>Purchasing RTSA mode (Option 350) does not enable Trace Recording and Playback in SA mode (Option 233).</p> <table border="1" data-bbox="573 640 1455 850"> <thead> <tr> <th data-bbox="573 640 1015 735">Trace record/playback features</th> <th data-bbox="1015 640 1299 735">SA mode SA &amp; Interference Analyzer Options 233 and 236</th> <th data-bbox="1299 640 1455 735">RTSA mode RTSA Option 350</th> </tr> </thead> <tbody> <tr> <td data-bbox="573 735 1015 772">Record and playback spectrum traces</td> <td data-bbox="1015 735 1299 772">Yes</td> <td data-bbox="1299 735 1455 772">Yes</td> </tr> <tr> <td data-bbox="573 772 1015 810">Save trace data with GPS time stamp over time</td> <td data-bbox="1015 772 1299 810">Yes</td> <td data-bbox="1299 772 1455 810">Yes</td> </tr> <tr> <td data-bbox="573 810 1015 850">Record and playback spectrogram data</td> <td data-bbox="1015 810 1299 850">Yes</td> <td data-bbox="1299 810 1455 850">No<sup>1</sup></td> </tr> </tbody> </table>	Trace record/playback features	SA mode SA & Interference Analyzer Options 233 and 236	RTSA mode RTSA Option 350	Record and playback spectrum traces	Yes	Yes	Save trace data with GPS time stamp over time	Yes	Yes	Record and playback spectrogram data	Yes	No <sup>1</sup>

Save trace data with GPS time stamp over time	Yes	Yes											
Record and playback spectrogram data	Yes	No <sup>1</sup>											
13. What are the requirements for Noise figure (NF) Option 356?	Requires spectrum analyzer mode (Option 233 on combination models), internal preamplifier (Option 235) and DC bias variable voltage source (Option 309). An external noise source is also required and FieldFox supports Keysight noise source models 346A/B/C/K40/K01. Also recommended to improve accuracy is an external preamplifier Keysight models U7227A/C/F or U7228A/C/F. Requires accessory item N9910X-713 BNC to SMB cable for DC bias variable voltage source to noise source connection.												
14. What is required for phased array antenna support (Option 360) and 5GTF over-the-air (OTA) measurements (Option 377)?	Requires spectrum analyzer mode (Option 233 on combination models). Recommend GPS receiver (Option 307) and internal preamplifier (Option 235). Also requires external mixer to down convert millimeter wave frequency to intermediate frequency (IF). Please see OML Inc. website <a href="http://www.omlinc.com">www.omlinc.com</a> for more information or contact a Keysight representative.												

<sup>1</sup> RTSA trace recordings can be recalled and played back in SA mode Spectrogram. This has the added benefit that the measurements are shown 'slower', making it easier for the human eye to decipher the signal content.

## FAQs – Applicable To All FieldFox RF and Microwave Analyzers

Question	Answer		
1. What USB power sensors work with Option 302?	All Keysight U2000x Series USB power sensors are supported with FieldFox. Visit: <a href="http://www.keysight.com/find/fieldfoxsupport">www.keysight.com/find/fieldfoxsupport</a> for an up-to-date listing.		
2. What is the difference between USB power sensor (Option 302) and built-in power meter (Option 310)?	<b>Option 302 USB power sensor</b>	<b>Option 310 Built-in power meter (or channel power meter)</b>	
	Description	Option 302 allows users to connect a USB power sensor to FieldFox's USB port and make broadband power measurements	Option 310 is a channelized power measurement capability built into FieldFox analyzers. Maximum bandwidth is 100 MHz.
	External hardware	USB power sensor required	None. Uses internal receiver.
	Power measurement	Broadband diode detector measures all frequencies	Tuned receiver, so measures frequencies within defined channel bandwidth
	Frequency range	Depends on USB sensor	Frequency range of the analyzer
	Settings	Set CW frequency	Set CW frequency, set channel width/span
	Power range	Depends on USB sensor	Depends on channel width and attenuator setting
	Warm-up time	30 minutes to meet accuracy specifications	No warm-up time required
	Accuracy	Depends on USB sensor	InstAlign accuracy: $\pm 0.5$ dB typical for a CW signal. Since the measurement is within a certain frequency channel or bandwidth, to make an accurate measurement, the user needs to know the exact center frequency and the signal's bandwidth and set those accurately.
	Programmable	Yes, via SCPI	Yes, via SCPI
Physical connection	The power sensor can easily be moved to the measurement point, with a USB cable connecting the detector to FieldFox.	The measurement point needs to be connected to FieldFox's RF input port. If an RF jumper cable is used, the user needs to account for the loss of the cable with an offset value (can be entered into the analyzer).	
FieldFox source control	Yes, on/off, and nominal power level control	No access to FieldFox's source from the built-in power meter mode

## FieldFox Spectrum Analyzer FAQs

Question	Answer
1. What is included with the basic spectrum analyzer?	Basic spectrum analysis, four traces, different detector types, radio standard selection, limit lines Channel power, occupied bandwidth, adjacent channel power AM/FM tune and listen, field strength measurements, antenna factors, frequency counter marker
2. What is included with Option 236?	Interference analyzer and spectrogram Trace playback and recording
3. What is included with Option 320?	Return loss and VSWR Normalization using data/memory
4. What is the difference between Option 320 and the CAT mode on the combo base model?	Option 320 on the N993xB SA offers RL and VSWR. CAT mode on the N991xB combo analyzers offer RL and VSWR, DTF, insertion loss, and also various calibration capabilities such as OSL.
5. What is included with Option 355?	FieldFox analog demodulation has two parts: (1) Tune and listen, and (2) AM/FM metrics. Tune and listen are available as a standard feature on all N993xB FieldFox spectrum analyzers. AM/FM metrics becomes available when Option 355 is purchased. AM/FM metrics provides the user with RF spectrum view, demodulated baseband signal waveform, carrier power, frequency deviation, SINAD and more.
